I closed the loop the Tom. I let him know that we're mainly devoting our resources to the current Extend registration and working towards the Dec decision, especially considering that the data has been recently submitted, and did not see capacity to work on this action.

These notes were helpful. Can you call Tom Marvin and update him on the status as well as our plan moving forward. I seem to recall that at one point they had discussed this as a transition product as part of the upcoming decision later this year.

Rick

There is question about which formulation they are referring to, because no pending product label goes by RoundUp Xtend II. However, we have some notes where a similar name refers to the pending premix with EPA File Symbol 524-AUI. Assuming this is the correct formulation, we have the following information:

Product name in OPPIN:
M1833 PREMIX HERBICIDE

Active Ingredients:
Dicamba Monoethanolamine
Glyphosate ethanolamine salt.

Original application date:
June 29, 2017

Current PRIA date:
March 31, 2020
(This date renegotiated with Bayer on 12/23/2019)

Status:
Product chemistry and Acute tox reviews are complete.
A 75 day letter was sent to the registrant on March 21, 2019 concerning issues with EFED waivers.

A response to EPA's 75-day letter for was submitted in June and is pending in EFED.

Other than the renegotiations, there has not been any recent discussions with the registrant on the work to complete this action. We had informed them that most of our resources are devoted to the existing Extend registration and the upcoming Dec 2020 decision.

Could you get me a quick update today? Something along the lines of when did it come in, PRIA date, what we have to do, next steps, any recent discussions with the company concerning the application.

Subject: Follow-up

Hi Rick,

Sorry for having to circle back on Roundup Extend II. Tate and RJ had a meeting a couple days ago and this came up is why I inquired about it yesterday. We were tasked with finding out where we were in the PRIA process with the product. I know there are a lot of issues flying around, but can we get a short update?

We also were wondering if the team had found any scientific issues with the product, or if it was something the team didn't have bandwidth for right now.

Happy to relay concerns.

Thanks,

Thomas
